Last information update: February 2023

Accessory code

MY36: Emergency kit **Attention! Code no longer in production**

Technical description

The kit includes the power supply + inverter + Ni-Mh battery. The recessed fitted connected to the kit is assigned to the emergency mode operation. 12-hour recharging for emergency autonomy of 1.5 hours / 24-hour recharging for emergency autonomy of 3 hours. The warning LED included must be positioned close to the emergency recessed opening. Further technical specifications on the emergency mode can be found in the instructions.

Installation

Positioning the emergency unit in the preparation hole of the recessed opening (for the round version the preparation hole needs to be increased from Ø59 to Ø60 mm). The warning LED needs a Ø 12 mm preparation hole (for the correct distances see the instructions).

Colour

Indeterminate (00)

Weight (Kg)

0.75

Wiring

Connections with specific connectors L + N / Le + Ne (emergency line) - connection of the warning LED, battery and recessed light with quick coupling terminals.

Complies with EN60598-1 and pertinent regulations
