

Pair of rods for pendant installation - for 3 products

Last information update: May 2025

Accessory code

PD01: Pair of rods for pendant installation - for 3 products

Technical description

Pair of tubular aluminium rods designed to create modular - linear and/or perpendicular - compositions of pendant luminaires. A single accessory can be used to install 3 consecutive luminaires. Successive in-line uses reduce this number by 1 unit (from 3 to 2 luminaires). The rods form the structural system of the compositions to create and are supplied with specific housings that facilitate their installation. The area that is free of connections can be used to position the driver boxes required for the luminaires.

Installation

The tubular rods are designed to be inserted inside the pendant accessories. For linear compositions the rods run in a uniform straight line. For complex octagonal-sided structures, the rods are positioned on superimposed levels according to the set up of the pendant accessories. A pair of rods is available for level compensations (PD02) - consult the instruction sheet.

Colour

Indeterminate (00) | Black (04)

Weight (Kg)

1

Complies with EN60598-1 and pertinent regulations
